#### DETAILED ACTION

1. Applicant's election with traverse of Group I, and Species I in the reply filed on 22 April 2004 is acknowledged. The traversal is on the ground(s) that that the heat seal of claim 1 and the release agent of claim 2 perform the same function. This is not found persuasive because the passages in the specification cited by applicant disclose either the use of the release agent or the heat seal material and not both at the same time. They are thus mutually exclusive, which is the condition that distinguishes species from mere variation in the invention.

The requirement is still deemed proper and is therefore made FINAL.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Toshima (U.S. 6,106,153) in view of Jaisle et al. (U.S. 6,076,969).

Toshima teaches a film for a bag wall made of a polymer such as propylene with heat seal ability or layers (col. 2, lines 50-60) with a slit formed in the film and a polymer film with a heat seal material sealed to the slit (col. 3, lines 35-45 and col. 4, lines 10-20). Jaisle et al. teach the use of oriented films, such as polypropylene to made bag films col. 4, lines 50-56). The instant invention claims an oriented film with a slit and a polymer cover film over the slit joined to the base sheet by a heat seal material. It would have been obvious to one of ordinary skill in the art to have used an oriented film as the bag film in Toshima to have greater strength and barrier properties because of the teachings of Jaisle et al.
